Result

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes human Apo-2. Apo-2 can be used CC therapeutically to induce apoptosis in mammalian cells, and so is useful CC to treat conditions associated with decreased apoptosis e.g. cancer. CC Apo-2 is believed to be a new tumour mecrosis factor (TWR) receptor CC (TWRR). TWR cytokines can induce apoptosis, thought to be initiated by binding to TWRRs, and Apo-2 triggered caspase-dependent apoptosis. It CC can be used to identify agents activating Apo-2, useful to treat CC mammalian cancer cells, and to produce Apo-2 chimeras useful CC therapeutically (e.g. those containing immunoglobulin sequences can be inhibit apoptosis) or diagnostically (e.g. those comprising an epitope CC inhibit apoptosis) or diagnostically (e.g. those comprising anti-tag CC antibodies). It can be used to produce antibodies which can be combined CC with a (particularly pharmaceutically acceptable) carrier in compositions CC comprising first and second Apo-2 antibodies). Agonistic (especially CC single-chain) antibodies can be administered to induce apoptosis in CC combined concerned to induce apoptosis in CC constitute apoptosis (e.g. in neurodegenerative diseases). Apo-2 CC expression in cells/tissues and in Apo-2 antibody, designated 16E2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

Apo-2 polypeptide is capable of triggering caspase-dependent apoptosis and activating nuclear factor-kappa B. A soluble extracellular domain of Apo-2. binds Apo-2 ligand (Apo-2L). Apo-2 antibodies may be used to activate or stimulate apoptosis in cancer cells. They are therefore especially useful in the treatment of cancer to enhance immune-mediated cell death in cells expressing Apo-2, to detect expression of Apo-2 in specific cells, tissues or serum, and in affinity purification of Apo-2 from recombinant cell culture or natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acids encoding an Apo-2 ligand, useful for activating stimulating apoptosis in cancer cells, thus especially useful in treatment of cancer, or in enhancing immune-mediated cell death
                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present

                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                        The invention describes a novel isolated Apo-2 polypeptide. The Apo-2 polypeptide is useful for inducing apoptosis in mammalian cells, in vivo or ex vivo gene therapy, in quantitative diagnostic assays, as a control against samples containing unknown quantities of Apo-2, in generating antibodies, in affinity purification techniques, and in competitive-type receptor binding assays when labelled with, for instance, radioiodine, enzymes, or fluorophores. Nucleic acids encoding Apo-2 may be used as a diagnostic for tissue-specific typing. This is the amino acid sequence of the single chain antibody fragment (svFv) 16E2 used in the preparation of anti-apo-2 antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Apo-2 apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15-MAY-1997;

CC therapeutically to induce apoptosis in mammalian cells, and so is useful to treat conditions associated with decreased apoptosis e.g. cancer. CC App-2 is believed to be a new tumour necrosis factor (TNF) receptor CC (TNFR). TNF cytokines can induce apoptosis, thought to be initiated by CC binding to TNFRs, and Apo-2 triggered caspase-dependent apoptosis. It CC can be used to identify agents activating Apo-2, useful to treat CC mammalian cancer cells, and to produce Apo-2 chimeras useful to therapeutically (e.g. those containing immunoglobulin sequences can be (inhibit apoptosis) or diagnostically (e.g. those comprising an epitope tag polypeptide allow Apo-2 detection and purification using anti-tag antibodies). It can be used to produce antibodies which can be combined CC with a (particularly pharmaceutically acceptable) carrier in compositions CC comprising first and second Apo-2 antibodies). Agonistic (especially single-chain) antibodies can be administered to induce apoptosis in mammalian cancer cells, and antagonistic antibodies used to block cercessive apoptosis (e.g. in neurodegenerative diseases). Apo-2 cercessive apoptosis and antagonistic antibodies (e.g. to detect Apo-2 cercessive apoptosis and antagonistic antibodies (e.g. to detect Apo-2 cercessive apoptosis and apoptosis (e.g. to detect Apo-2 cercessive apoptosis and apoptosis (e.g. to detect Apo-2 cercessive apoptosis (e.g. to detect Apo-2 cercessive apoptosis (e.g. to detect Apo-2 cerces (e.g. to detect Apo-2 ce Sequence 312 AA;

                                     20E6, which is isolated from a phage library. It is believed that Apo-2 is a member of the tumour necrosis factor receptor (TNFR) family. Apo-2 polypeptide is capable of triggering caspase-dependent apoptosis and activating nuclear factor-kappa B. A soluble extracellular domain of Apo-2 binds Apo-2 ligand (Apo-2L). Apo-2 antibodies may be used to activate or stimulate apoptosis in cancer cells. They are therefore especially useful in the treatment of cance to enhance immune-mediated cell death in cells expressing Apo-2, to detect expression of Apo-2 in specific cells, tissues or serum, and i
                                                                                                                                                                            New nucleic acids encoding an Apo-2 ligand, stimulating apoptosis in cancer cells, thus treatment of cancer, or in enhancing immune.

Sequence

312

A

The invention describes a novel isolated Apo-2 polypeptide. The *l* polypeptide is useful for inducing apoptosis in mammalian cells, or ex vivo gene therapy, in quantitative diagnostic assays, as a against samples containing unknown quantities of Apo-2, in genera

control

vivo

The peptide, optionally in association with or attached, coupled, combined, linked or fused to a pharmaceutical agent, is useful in the manufacture of a medicament, where the medicament has activity against a diseased cell, preferably a cancer cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma, myeloma, blastoma, seminoma, and melanoma, where the leukaemia cell is an acute myeloid leukaemia cell). The peptide is also useful for preparing a composition for use in inhibiting the growth of a diseased or cancer cell. This sequence represents a human Fv molecule hypervariable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hagai Y,

                                                                                                                                δÃ
                                                                                                                                                                                                                                                                                                         The invention relates to an isolated epitope present on cancer cells and C important in physiological phenomena such as cell rolling, metastasis and c inflammation, where the epitope is capable of being bound by an antibody, cris antigen-binding fragment or its complex comprising at least one antibody or its binding fragment having a first hypervariable region. The C epitopes are useful for inhibiting cell rolling, inflammation, autoimmune CC disease, thrombosis, restenosis, metastasis, growth and/or replication of C tumour or leukaemia cells, increase in number of tumour or leukaemia cells in a patient, cell-cell, cell-matrix, platelet-matrix, for increasing mortality of tumour or leukaemia cells, for increasing the cusceptibility of diseased cells to damage by anti-disease, anti-cancer cor anti-leukaemia agents, or for decreasing the number of tumour or the above mentioned purposes. The epitopes are useful for diagnosing and treating diseases such as cancer, leukaemia, autoimmune diseases, inflammatory diseases, cardiovascular diseases such as myocardial cor inflammatory diseases, cardiovascular diseases such as myocardial platelet function and diseases caused by sulphated tyrosine-dependent protein protein interactions. This sequence represents a human antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                      Matches
                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a peptide or polypeptide comprising an Fv molecule, a construct or fragments or a construct of a fragment with enhanced binding characteristics which selectively and/or specifically binds to a target cell in favour of other cells, where binding is primarily determined by a first hypervariable region and Fv is a single chain Fv (scFv) or a disulfide Fv (dsFv). The peptide, optionally in association with or attached, coupled, combined, linked or fused to a pharmaceutical agent, is useful in the manufacture of a medicament, where the medicament has activity against a diseased cell, preferably a cancer cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel peptide/polypeptide for cancer therapy has Fv molecule, construct or fragment, or construct of fragment with enhanced binding characteristics so as to selectively bind target cell in favour of other
                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                    myeloma, blastoma, seminoma, and melanoma, where the leukaemia cell is accute myeloid leukaemia cell). The peptide is also useful for preparing composition for use in inhibiting the growth of a diseased or cancer cell. This sequence represents a human Fv molecule hypervariable region related peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hagai Y,

                      the present invention describes human Apo-2. Apo-2 can be used therapeutically to induce apoptosis in mammalian cells, and so is useful to treat conditions associated with decreased apoptosis e.g. cancer. CC Apo-2 is believed to be a new tumour necrosis factor (TNF) receptor CC (TNFR). TNF cytokines can induce apoptosis, thought to be initiated by CC binding to TNFs, and Apo-2 triggered caspase-dependent apoptosis. It CC can be used to identify agents activating Apo-2, useful to treat CC mammalian cancer cells, and to produce Apo-2 chimeras useful therapeutically (e.g. those containing immunoglobulin sequences can be contained to produce Apo-2 or inhibit apoptosis) or diagnostically (e.g. those comprising an epitope tag polypeptide allow Apo-2 detection and purification using anti-tag antibodies). It can be used to produce antibodies which can be combined CC with a (particularly pharmaceutically acceptable) carrier in compositions CC comprising first and second Apo-2 antibodies). Agonistic (especially csingle-chain) antibodies can be administered to induce apoptosis in mammalian cancer cells, and antagonistic antibodies used to block cseciesive apoptosis (e.g. in neurodegenerative diseases). Apo-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human Apo-2 polypeptide inducing apoptosis - useful to treat conditions linked with decreased apoptosis e.g. cancer, and antibodies to increase or decrease apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 14; Fig 16; 134pp; English.

Apo-2 polypeptide is capable of triggering caspase-dependent apoptosis and activating nuclear factor-Kappa B. A soluble extracellular domain of Apo-2 binds Apo-2 ligand (Apo-2L). Apo-2 antibodies may be used to activate or stimulate apoptosis in cancer cells. They are therefore especially useful in the treatment of cancer to enhance immune-mediated cell death in cells expressing Apo-2, to detect expression of Apo-2 in specific cells, tissues or serum, and in affinity purification of Apo-2 from recombinant cell culture or natural

The Apo-2 polypeptide is useful for inducing apoptosis in mammalian cells, in vivo or ex vivo gene therapy, in quantitative diagnostic assays, as a control against samples containing unknown quantities of Apo-2, in generating antibodies, in affinity purification techniques, and in competitive-type receptor binding assays when labelled with, for instance, radioiodine, enzymes, or fluorophores. Nucleic acids encoding Apo-2 may be used as a diagnostic for tissue-specific typing. This is the amino acid sequence of the single chain antibody fragment (svFv) 24C4 used in the preparation of anti-apo-2 antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New Apo-2 apoptosis
                                                                                                                                                                   Human; antibody; epitope; cancer; tumour; cell rolling; inflammation; metastasis; hypervariable region; autoimmune disease; thrombosis; restenosis; leukaemia; inflammatory disease; cardiovascular disease; myocardial infarction; retinopathic disease; abnormal platelet functisulphated tyrosine-dependent protein-protein interaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Apo-2

                                                                                                 Q
                                                                                                                                      В
                                                                                                                                                                 Ωy
                                                                                                                                                                                                                                                                           The invention relates to an isolated epitope present on cancer cells and CC important in physiological phenomena such as cell rolling, metastasis and CC inflammation, where the epitope is capable of being bound by an antibody, its antigen-binding fragment or its complex comprising at least one CC epitopes are useful for inhibiting cell rolling, inflammation, autoimmune CC epitopes are useful for inhibiting cell rolling, inflammation, autoimmune CC epitopes are useful for inhibiting cell rolling, inflammation, autoimmune CC epitopes are useful for increase in number of tumour or leukaemia cells, increase in number of tumour or leukaemia CC etlls in a patient, cell-cell, cell-matrix, platelet-matrix, platelet-platelet adhesion or aggregation, for CC increasing mortality of tumour or leukaemia cells, for increasing the susceptibility of diseased cells to damage by anti-disease, anti-cancer CC or anti-leukaemia agents, or for decreasing the number of tumour or leukaemia cells in a patient, or in the manufacture of a medicament for the above mentioned purposes. The epitopes are useful for diagnosing and CC treating diseases such as cancer, leukaemia, autoimmune diseases,

                                                                                                                                               밁
                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                            This invention describes novel antibodies that immunospecifically bind to CC B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TME) super family and induces B cell CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory. CC entirheumatic and antiAIDs activity and can be used in vaccines to CC inhibit the expression and activity and can be used in vaccines to CC and so may be used to detect and quantitate the presence of BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC indicated with aberrant expression of BLyS. They may also be associated with aberrant expression of BLyS. They may also be CC administered to treat diseases associated with aberrant and autoimmune disorders and CC administered to treat diseases associated with aberrant blyS expression CC and activity such as cancer, immune, and autoimmune disorders and CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and CC acquired immunodeficiency syndrome (AIDS)). ABP47228 represent to the arthrodies and frammonts of the arthrodies after the arthrodies are the arthrodies and the present contains and authorities are appresent contained and activate and arthrodies and arthrodies and arthrodies and arthrodies and arthrodies are appresent.
                                                                                                                                                                                                                                      Query Match
